Evil by Design Chris Nodder 2013-06-05 How to make customers feel good about doing what you want Learn how companies make us feel good about doing what they want. Approaching persuasive design from the dark side, this book melds psychology, marketing, and design concepts to show why we're susceptible to certain persuasive techniques. Packed with examples from every nook and cranny of the web, it provides easily digestible and applicable patterns for putting these design techniques to work. Organized by the seven deadly sins, it includes: Pride — use social proof to position your product in line with your visitors' values Sloth — build a path of least resistance that leads users where you want them to go Gluttony — escalate customers' commitment and useless aversion to keep them there Anger — understand the power of metaphysical arguments and anonymity Envy — create a culture of status around your product and feed aspirational desires Lust — turn desire into commitment by using emotion to defeat rational behavior Greed — keep customers engaged by reinforcing the behaviors you desire Now you too can leverage human fallibility to create powerful persuasive interfaces that people will love to use — but will you use your new knowledge for good or evil? Essential Buddhism Jack Maguire 2013-09-03 Four hundred million people call themselves Buddhists today. Yet most Westerners know little about this powerful, Eastern-spawned faith. How did it begin? What do its adherents believe? Why are so many Westerners drawn to it? Essential Buddhism responds to these questions and many more, offering an accessible, global perspective on the religion's past, present, and future. It identifies how the principal concepts and practices originated and evolved through diverse cultural adaptations into three basic formats: * Theravada (including Vipassana, brought from Vietnam in the 1960s and including such practitioners as Jack Kornfield and Jon Kapat-Zinn) * Mahayana (including Zen Buddhism, originally brought to America by Japanese teachers after World War II and popularized by Jack Kerouac and Thomas Merton) * Vajrayana (including Tibetan Buddhism, from the teachers who fled the Chinese takeover of Tibet in the 1950s as well as the Dalai Lama, and embraced by Allen Ginsberg, Richard Gere, and countless others) Essential Buddhism is the single best resource for the novice and the expert alike, exploring the depths of Buddhism's popularity and illuminating its tenets and sensible approach to living. The Sailing Mind Roberto Casati 2022-06-01 This book scrutinizes the practice of sailing and its relation to philosophy of mind. Sailing brings about a peculiar human-artifact interaction which can lead to unexplored research paths. The idea behind this collection is that this interaction is better scrutinized by sailor scientists/philosophers to open up new possible pathways in research. Fascinating theoretical breakthroughs have been provided by observing sailing practices with the most well-known being Hutchins' introduction in cognitive science of the concept of "distributed cognition." However, in times past, sailing has both fueled philosophical metaphors, from Theseus' ship to Plato's image of the intellect as the boatperson of the soul, and inspired philosophers' views (as happened to Herder during a stormy sea trip). The ecology of sailing is highly constrained: sailboats move at the surface between a compressible fluid and an uncompressible fluid. Wind originates in certain specific circumstances. Only certain sequences of actions are possible to take advantage of this ecology. The ontology of sailing is both of the boat and of the ocean/wind system. It highlights the fact that sailboats have been for centuries arguably the most complex technological artifacts in each culture that developed them, precisely because the environment they are engaging is so peculiar and demanding - almost the precise dual of Sapiens' adaptive environment. This volume will appeal to philosophers of mind, cognitive psychologists, and marine professionals.

The Economics and Politics of Oil in the Caspian Basin Boris Najman 2007-09-12 The Caspian Basin region has boomed since the late 1990s due to new oil discoveries, new pipelines that have diversified countries' transport options and world oil prices that have risen from below \$10 in 1998 to \$70 in 2006. This book analyzes the experience of the Caspian countries during the oil boom. It is founded on empirical studies, using either macroeconomic tools or an analysis of public budgets, or microeconomic analysis of household survey data or fieldwork in oil-producing regions. Moving from aggregated to disaggregated analysis and, in-keeping with its emphasis on rigorous empirical analysis to the greatest extent possible, several chapters are written by specialists on the Caspian region. Whilst there is an emphasis on the economic consequences of the oil boom, the interdisciplinary aspects of the phenomenon are also recognized. Overall, the analysis is firmly rooted in the region, yet the empirical studies also provide a basis for drawing broader lessons about the effects of an oil boom.

Advances in Dryland Farming in the Inland Pacific Northwest Georgine Yorgey 2017-06-15 The Pacific Northwest is an important wheat production region. In 2015, the National Agricultural Statistics Service indicated that Washington, Idaho, and Oregon harvested more than 240 million bushels of wheat, worth an estimated \$1.3 billion. The major areas of production in the inland Pacific Northwest include three major land resource areas with distinctive geologic features and soils as defined by the US Department of Agriculture: the Columbia Basin, the Columbia Plateau, and the Palouse and Nez Perce Prairies, all of which are within the Northwestern Wheat and Range Region. It also includes a small portion of dryland cropping in the North Rocky Mountains major land resource area, adjacent to the eastern edge of the Palouse and Nez Perce Prairies. In the dryland areas, which are the focus of this book, wheat is grown in rotation with crop fallow and much smaller acreages of other small grains, legumes, and alternative crops. In light of ongoing and new challenges being faced by farmers in the region it is an opportune time to synthesize research-based advances in knowledge to support farmer decision-making and improve the long-term productive capacity of farmland in the region. This book should be viewed as a resource that launches further inquiry rather than an end point.
