Management Research by Practitioners Reno Symmank 2018-05-23 This handbook focus on management research by practitioners. The book would not have been possible without the German cohort 6, who set the forum for lively discussions and supported all researchers on their journey to its doctorate. The book is set up in three chapters. Chapter I "One of the main triggers for this thesis was my direct experience of the financial crisis, as it showed that many principles and assumptions that were believed to be "carved in stone" were challenged overnight. Investors lost confidence as Corporate Governance turned out to be very poor in reality, although companies consistently declared in their disclosures that they followed good Corporate governance guidelines". This section develops a Corporate governance reporting taxonomy, which can be used for electronic reporting and is the basis for the digitalisation in accounting. A mixed-method approach s applied which combines qualitative and quantitative research methods. Chapter II deals with an analysis of marketing process governance in multinational enterprises and is based on an empirical analysis of FT500 index corporations. The literature showed, that there is currently little substantial understanding of how activities and processes in marketing can be sourced and geographically relocated. However, there is substantial evidence in scholarly and managerial literature that marketing process reallocation is a subject of increasing attention for the last five years. Chapter III focus on out of stock situations (OOS) in retail stores. One of the major advantages of store-based retail formats is the availability of products. The unavailability of products is a major threat for store-based retail formats as OOS situations are considered to be some of the most displeasing occurrences for consumers, resulting in dissatisfaction. As avoiding or recovering from OOS situations are matters of allocating limited resources (e.g. staff, money) wherever they are most effective, this work recommends actions that retailers can take to manage OOS occurrences at store-based retail formats to increase consumer satisfaction. All three researcher describe in their reflexive diaries how thy managed to be sucessfull on their long journey to the finalisation of their thesis. We all three would also like to thank our supervisors and all of our contributors. Let the words speak for themselves.

Retail Supply Chain Management James B. Ayers 2007-11-26 A consequence of business specialization is the implementation of weak processes that cross departmental and corporate boundaries. Supply chain management (SCM) addresses this issue by requiring a process view that reaches across these confines. Due to globalization and a competitive environment, those within the retail supply chains are particularly vulnerable. New ways of managing require an understanding of the entire chain by participants at every level-retailer, distributor, manufacturer, and service provider. Demonstrating the link between markets, products, and product strategies in the supply chain, Retail Supply Chain Management provides the knowledge and skills required to thrive in this environment. It demonstrates the connection between the processes involved in manufacturing, distribution, warehousing, and transportation, and how to use these connections to their best advantage. The book offers fresh insights into the financial and operational tools that are available and how to use these tools in order to deliver quality products in the most cost efficient manner. The authors' collaboration brings together expertise from both operations and retail business management, matching the solutions available from SCM with the challenges and opportunities that arise in the retail industry. The text also includes case studies and experiences from leaders in SCM as well as hard lessons learned by those trying to lead. These examples illustrate specific solutions to common situations in a retail supply chain.

This considerable change in consumer behavior offers great potential for retailers worldwide to strengthen their competitiveness.
