Returns to Investment in University Training David A. Dodge 1972 From the Introduction: The purpose of this case study is to estimate an earnings determination model for Canadian chartered accountants, engineers and scientists, and on the basis of this model to estimate the returns to investment in some fields of higher education in Canada. These estimates will then be compared and contrasted with the results from other studies and some implications for Canadian education policy will be drawn. In pursuing this general purpose, the following specific issues will be considered: (1) the structure of earnings in the public and private sectors, and the differential effect of formal education on earnings in the two sectors; (2) the impact of work function on earnings and the relationship between formal education and work function; (3) the

effect on earnings of ability as measured by high school marks, and the interaction of ability and formal education; and (4) the sensitivity of the estimates of earnings to the form of the earnings model.
