How To Watch Television Ethan Thompson 2013-09-16 Examines social and cultural phenomena through the lens of different television shows We all have opinions about the television shows we watch, but television criticism is about much more than simply evaluating the merits of a particular show and deeming it 'good' or 'bad.' Rather, criticism uses the close examination of a television program to explore that program's cultural significance, creative strategies, and its place in a broader social context. How to Watch Television brings together forty original essays from today's leading scholars on television culture, writing about the programs they care (and think) the most about. Each essay focuses on a particular television show, demonstrating one way to read the program and, through it, our media culture. The essays model how to practice media criticism in accessible language, providing critical insights through analysis—suggesting a way of looking at TV that students and interested viewers might emulate. The contributors discuss a wide range of television programs past and present, covering many formats and genres, spanning fiction and non-fiction, broadcast and cable, providing a broad representation of the programs that are likely to be covered in a media studies course. While the book primarily focuses on American television, important programs with international origins and transnational circulation are also covered. Addressing television series from the medium's earliest days to contemporary online transformations of television, How to Watch Television is designed to engender classroom discussion among television critics of all backgrounds.

The Flip Side of Free Michael Kende 2021-03-09 Why "free" comes at a price: the costs of free internet services

in terms of privacy, cybersecurity, and the growing market power of technology giants. The upside of the internet is free Wi-Fi at Starbucks, Facetime over long distances, and nearly unlimited data for downloading or streaming. The downside is that our data goes to companies that use it to make money, our financial information is exposed to hackers, and the market power of technology companies continues to increase. In *The Flip Side of Free*, Michael Kende shows that free internet comes at a price. We're beginning to realize this. Our all-purpose technocaveat is "I love my smart speaker...but"--is it really tracking everything I do? listening to everything I say? My Google Chromebook Michael Miller 2011-10-14 Presents information on using a Google Chromebook, covering such topics as using Chrome OS, networking, using external storage, browsing the Web, using Chrome Apps, working in the cloud, printing, and security.

The "People Power" Job Superbook Book 10: Media-Journalism Career (Journalism Jobs-Schools, Worldwide Media Guide) Tony Kelbrat 2013-12-22 In general, communications is considered a glamor industry because of the creativity involved so competition is fierce, even for people with advanced degrees. I've known several people with journalism degrees who couldn't find a job so they ended up as high school teachers or something

like that. It's all about your ability with words. Newscasts have to be written everyday. They have to have fresh, new, exciting, crisp stories. It takes a certain pragmatic skill to write good news copy quickly. If you can get a story, summarize it down into your own words very quickly, edit news footage to go with it to create a quick story on the nightly newscast, you will easily be in demand because these skills are rather rare. People who do these jobs often get tired of the stress involved and quit. On the other hand, I heard of one talk show host who had two jobs in different cities. He did his morning talk show, took a plane to the other city 150 miles away, did his evening show

Shelters, Shacks and Shanties Daniel Carter Beard 2015-09-11 ÆIf my present reader happens to be a Boy Scout or a scout-master who wants the scouts to build a tower for exhibition purposes, he can do so by following the directions here given, but if there is real necessity for haste in the erection of this tower, of course we cannot build one as tall as we might where we have more time. With a small tower all the joints may be quickly lashed together with strong, heavy twine, rope, or even wire; and in the wilderness it will probably be necessary to bind the joints with pliable roots, or cordage made of bark or withes; but as this is not a book on woodcraft we will suppose that the reader has secured the proper material for fastening the joints of the frame of this signal-tower and he must now shoulder his axe and go to the woods in order to secure the necessary timber. First let him cut eight straight polesÑthat is, as straight as he can find them. These poles should be about four and one half inches in diameter at their base and sixteen and one half feet long. After all the branches are trimmed off the poles, cut four more sticks each nine feet long and two and a half or three inches in diameter at the base; when these are trimmed into shape one will need twenty six or seven more stout sticks each four and one half feet long for braces and for flooring for the platform.
